**Note :** 3 is multiplied as we have to select which dice will have doublet

$$\Pr(X = 2) = 3 \times \Pr(X_1 \neq X_2) \times \Pr(X_1 = X_2)^2 \quad (0.0.7)$$

$$= \frac{15}{216} \quad (0.0.8)$$

And lastly,

$$\Pr(X = 2) = \Pr(X_1 = X_2)^3 \quad (0.0.9)$$

$$= \frac{1}{216} \quad (0.0.10)$$

## PROBLEM 5.27

Find the probability distribution of number of doublets in three throws of a pair of dice?

## SOLUTION

Let  $X_1, X_2 \in \{1, 2, 3, 4, 5, 6\}$  represent the two dice. We have,

$$\Pr(X_1 = X_2) = \frac{1}{6} \quad (0.0.1)$$

Similarly we have,

$$\Pr(X_1 \neq X_2) = \frac{5}{6} \quad (0.0.2)$$

Let the number of doublets in three throws of a pair of dice be represented by a random variable,  $X$

When a pair of dice is thrown three times the number of doublets can be 0,1,2 and 3 respectively. So  $X$  can take these values

$$\Pr(X = 0) = \Pr(X_1 \neq X_2)^3 \quad (0.0.3)$$

$$= \frac{125}{216} \quad (0.0.4)$$

Similarly we have,

$$\Pr(X = 1) = 3 \times \Pr(X_1 \neq X_2)^2 \times \Pr(X_1 = X_2) \quad (0.0.5)$$

$$= \frac{75}{216} \quad (0.0.6)$$

The probability distribution of number of doublets in three throws of a pair of dice can be found out at figure 0. The corresponding table can be found at table 0

No. of Doublets	Probability
0	$\frac{125}{216}$
1	$\frac{75}{216}$
2	$\frac{15}{216}$
3	$\frac{1}{216}$

TABLE 0: Probability of doublets
